Amendments to the Specification:

Page 1, replace the first complete paragraph with the following amended paragraph:

The invention relates to a device for adjusting rotation angles as claimed in the precharacterizing clause of the patent claim 1 or 16.

Page 3, replace the fourth complete paragraph with the following amended paragraph:

For a device of this generic type for adjusting rotational angles, this object is achieved by the location of the magnet on the rotation axis of the rotor, the use of a Hall sensor which is two-dimensionally sensitive for magnetic fields parallel to its chip surface, and the location of the Hall sensor on the side of the receptacle, which faces away from the open side, in addition, the adjustability of the magnet with respect to the rotor, when the rotor is in one rotation angle position the characterizing features of claim 1 or 16.

Page 4, replace the second complete paragraph with the following amended paragraph:

Further refinements of the invention <u>follow</u> are the subject matter of the dependent elaims.
